Problem

In this challenge, you'll work with arithmetic operators. Check out the Tutorial tab for learning materials and an instructional video!

Given the meal price (base cost of a meal), tip percent (the percentage of the meal price being added as tip), and tax percent (the percentage of the meal price being added as tax) for a meal, find and print the meal's total cost.

Discussions

Note: Be sure to use precise values for your calculations, or you may end up with an incorrectly rounded result!

Leaderboard

Input Format

There are 3 lines of numeric input:

The first line has a double, *mealCost* (the cost of the meal before tax and tip).

Submissions

The second line has an integer, tipPercent (the percentage of mealCost being added as tip).

The third line has an integer, taxPercent (the percentage of mealCost being added as tax).

Output Format

Print The total meal cost is total Cost dollars., where total Cost is the rounded integer result of the entire bill (meal Cost with added)tax and tip).

Sample Input

```
12.00
```

Sample Output

The total meal cost is 15 dollars.

Explanation

mealCost = 12, tipPercent = 20, taxPercent = 8

Calculations:

$$tip = 12 imes rac{20}{100} = 2.4 \ tax = 12 imes rac{8}{100} = 0.96$$

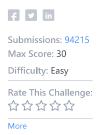

$$tax = 12 \times \frac{0}{100} = 0.96$$

$$totalCost = mealCost + tip + tax = 12 + 2.4 + 0.96 = 15.36$$

round(totalCost) = 15

We round totalCost to the nearest dollar (integer) and then print our result:

The total meal cost is 15 dollars.
